

The Speed Check

Slow means closed.

If your site is still loading, your customer has already left. Here is how to check, and what usually causes it.

CHECK IT YOURSELF

- 1 Open your site on your phone using mobile data, not WiFi. Count the seconds.
- 2 Run your link through Google PageSpeed Insights. It is free.
- 3 Look at the mobile score, not desktop.

USUAL CULPRITS

- ☐ Huge photos straight from a camera.
- ☐ Sliders and auto-playing video.
- ☐ Too many plugins or apps.
- ☐ Pop ups loading before the page.
- ☐ Cheap or overloaded hosting.

QUICK FIXES

- ☐ Compress every photo before uploading.
- ☐ Remove the slider. Use one strong image.
- ☐ Delete plugins you do not use.
- ☐ Test on a cheap phone, not your laptop.

DO THIS TODAY Run PageSpeed Insights on your homepage and screenshot the mobile score.

Send us your link and we will tell you the 3 biggest things slowing it down. DM @crode_studio or email hello@crode.studio
